TABLE OF CONTENTS

Preface 1

Part A. Computational fluid mechanics

A deterministic view of shear turbulence
S.I. Cheng 5

Calculation of external-internal flow fields for mixed-compression inlets
W.J. Chyu, T. Kawamura and D.P. Bencze 21

A numerical model for supersonic reacting mixing layers
J.P. Drummond, R.C. Rogers and M.Y. Hussaini 39

A simple iterative procedure for reducing stiffness and computer memory in reactive flow problems
A.N. Eraslan and R.C. Brown 61

Flow solution on a dual-block grid around an airplane
L.-E. Eriksson 79

Simulation of transonic flow in radial compressors
L.-E. Eriksson 95

Characteristics Petrov-Galerkin subdomain methods for two-phase immiscible flow
N.G. Espedal and R.E. Ewing 113

Velocity weighting techniques for fluid displacement problems
R.E. Ewing, R.F. Heinemann, J.V. Koebbe and U.S. Prasad 137

Recent developments and engineering applications of the vortex cloud method
R.I. Lewis 153

Smoothing and the second law
M.L. Merriam 177

Modified equation techniques for reactive-diffusive systems. Part 1: Explicit, implicit, and quasilinear methods
J.I. Ramos 195

Modified equation techniques for reactive-diffusive systems. Part 2: Time linearization and operator-splitting methods
J.I. Ramos 221

A comparison of numerical algorithms for unsteady transonic flow
W.A. Sotomayer, L.N. Sankar and J.B. Malone 237

Numerical tests of a modified full implicit continuous Eulerian (FICE) scheme with projected normal characteristic boundary conditions for MHD flows
S.T. Wu and J.F. Wang 267

Part B. Mesh generation and rezoning

Algebraic grid generation
R.E. Smith and L.-E. Eriksson 285

On the use of composite grid schemes in computational aerodynamics
J.L. Steger and J.A. Benek 301

Adaptive grid generation
P.R. Eisemann 321

A general three-dimensional elliptic grid generation system on a composite block structure
J.F. Thompson 377

Part C. Solid mechanics

Nonlinear/linear unified thermal stress formulations: Transfinite element approach
K.K. Tamma and S.B. Railkar 415

Nonlinear analysis of isotropic, orthotropic and laminated plates and shells
H. Rothert and U. Dehmel 429

FE thermomechanics and material sampling points
E. van der Giessen 447

Part D. Numerical methods and supercomputing

Duality and variational principles of potential boundary value problems
G. Alduncin 469

Algorithms and experiments for structural mechanics on high-performance architectures
M.W. Berry and R.J. Plemmons 487

Mixed and penalty formulations for finite element analysis of an eigenvalue problem in electromagnetism
F. Kikuchi 509

BIE method to analyze wave motion in solids with periodically distributed cavities
M. Kitahara and J.D. Achenbach 523

Concurrent function evaluations in local and global optimization
R.B. Schnabel 537

Global mode hourglassing control
J.C. Schulz 553

Multisplitting and parallel iterative methods
R.E. White 567
